DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 2, 3, and 7-9, drawn to a lever/linking arrangement, classified in class 074, subclass 519.
- II. Claims 4-6, drawn to a coefficient of friction testing device in combination with a lever/linking system, classified in class 073, subclass 9.

Claim 1 is a linking claim. Claim 1 will be examined with the election of either Group I or Group II.

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the coefficient of friction testing apparatus of claim 4 does not require the lever/linking systems as found in claims 2, 3, and 7-9. The subcombination has separate utility such as a lever/linking system for raising and lowering a platform attached to any rigid structure, e.g., the mower deck of a tractor.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
